Every year when April 14 rolls around we like to acknowledge Noah Webster, who published the first *American Dictionary of the English Language* on this date in 1828. Webster considered American English not a poor cousin of the mother tongue of British English, 39 a legitimate body worth respecting, recording, and, yes, reforming. The American lexicographer attempted to 40 a number of spelling reforms. Noah Webster's efforts were part of a long history of attempts to reform the quirky English orthography. In 1876, on the centennial of the American Declaration of Independence, and almost half a century after the *American Dictionary of the English Language* was first published, a committee of the American Philological Association (APA) recommended serious spelling reform. Ten years after that, the members of the APA produced a list of 3,500 words whose spellings, they felt, should be changed. But 41 almost 200 years of lists, announcements, and pronouncements, it is still safe to say that more lasting changes in American spelling have been the result of actual use by the people, not of decrees from on high.

My mother was 82 and living in Keoluk when, unaccountably, she insisted upon attending a convention of old settlers of the Mississippi Valley. All the way there, and it was some distance, she was young again with excitement and eagerness. At the hotel she asked immediately for Dr. Barrett of St. Louis. He had left for home that morning and would not be back, she was told. She turned away, the fire all gone from her, and asked to go home. Once there she sat silent and thinking for many days, then told us that when she was 18 she had loved a young medical student with all her heart. There was a misunderstanding and he left the country; she had immediately married, to show him that she did not care. She had never seen him since and then she had read in a newspaper that he was going to attend the old settlers' convention. "Only three hours before we reached that hotel he had been there," she mourned.

She had kept that pathetic burden in her heart 64 years without any of us suspecting it. Before the year was out, her memory began to fail. She would write letters to schoolmates who had been dead for 40 years and wonder why they never answered. Four years later she died.

- Advertising affects a consumer's perception of value by contributing to the symbolic value and the social meaning of a brand. Symbolic value refers to what a product or service means to consumers in a non-literal way. 47 Otherwise, they would not be brands, but unmarked commodities. Social meaning refers to what a product or service means in a societal context. 48 Often, the product's connection to a social class shows a need within consumers to move up in class.
- Researchers have long argued that objects are never just objects. 49 It is important to remember that these meanings often become just as much a part of the product as some physical features. Since advertising is an essential way in which the image of a brand is developed, it influences consumers' perception of the value of the brand. 50 In other words, if the image of a product is valued by consumers, then consumers will pay to buy the product.
