If you're an artist, you probably have an opinion about Bob Ross, and I'm no exception to that. Personally, I think in his life he did a lot of good—most notably by encouraging 46 numbers of people to start painting, even if they'd been discouraged from doing art before. But there are a few problems with the Bob Ross Method which have kept me from being a 47 of what he taught. First of all, the way that Bob Ross teaches, most of his students' paintings end up looking just 48 his. This may be fine in the beginning, but all it does in the long run is encourage a 49 on Bob Ross. In other words, what happens when a truly dedicated “ Bob Ross Method ” painter wants to paint a scene that Bob never covered? Where do they go for help? There's really nowhere to go. They're stuck, because they were never taught how to 50 ideas for paintings on their own.

## 四、閱讀測驗【請依照段落上下文意，選出最適當的答案】

### 第一篇：

Infecting mosquitoes with a bacterium is a roundabout way to fight dengue fever, but scientists are working hard on it because otherwise the options are few. Dengue, nicknamed “ breakbone fever ” for the crippling pain it causes, infects 390 million people every year. Because there is no cure or treatment, the chief strategy has been to attack *Aedes aegypti*, the mosquito that transmits the virus. Yet common insecticides such as temephos have lost much of their effectiveness as mosquitoes have developed resistance. Bed nets are almost useless, too, because *A. aegypti* typically feed during the day. At present, one of the most promising tools for halting the spread of dengue—and perhaps malaria and other mosquito-borne illnesses—appears to be spreading *Wolbachia* among wild mosquitoes.

*Wolbachia* is not an obvious choice as a dengue fighter. It does not naturally occur in the mosquitoes that most often transmit dengue. Scientists actually have had to infect those mosquitoes artificially, in the laboratory. In other words, they use *Wolbachia* to immunize the mosquitoes against dengue and then set them loose in the wild, where those mosquitoes will pass the bacterium to their offspring. *Wolbachia* is largely benign for mosquitoes and the environment, although it may reduce the insects' egg production. But the potential benefits for humans are clear: if mosquitoes infected with *Wolbachia* become predominant in the wild, scientists expect dengue infection rates among people to drop.

- (4)51. What is this passage mainly about?
- (1) How dengue fever spreads among humans
  - (2) How a potential cure for dengue fever is being developed.
  - (3) How mosquitoes can be killed effectively.
  - (4) How a bacterium may help us fight dengue fever.
- (1)52. Which of the following is supported by the passage?
- (1) Common pesticides may not kill *A. aegypti*.

- (2) People get bitten by *A. aegypti* mostly at night.
- (3) *Wolbachia* will kill *A. aegypti* eventually.
- (4) *Wolbachia* may seriously pollute the environment.

(3) 53. What can be inferred about mosquitoes infected with *Wolbachia*?

- (1) They will not bite people.
- (2) They will have offspring with dengue fever.
- (3) They will not get dengue fever.
- (4) They will produce much more eggs.

(2) 54. What do scientists think about using *Wolbachia*?

- (1) Its effect is still not clear up to now.
- (2) It may be helpful in fighting some mosquito-borne illnesses.
- (3) It can be very easily done, and that's why they focus their effort on it.
- (4) It is the most direct way to reduce the number of *A. aegypti*.

(1) 55. Which of the following will the scientists most probably do?

- (1) Releasing mosquitoes with *Wolbachia* in the wild.
- (2) Infecting mosquitoes with dengue fever in the laboratory.
- (3) Injecting themselves with *Wolbachia* as an experiment.
- (4) Developing a new pesticide to kill *A. aegypti*.

第二篇：

With more than fifty percent of the world's people living in big cities, the problem of overpopulation is becoming a major concern. The International Council of Societies of Industrial Design (Icsid) promotes industrial design as the answer to many **urban** problems. Icsid began the World Design Capital program in 2008. The program is held every two years to honor metropolitan areas that have successfully used design as a tool to improve the lives of city residents. In 2013, Taipei was chosen to be the host city for this event in 2016. Taipei's plan to focus on sustainability with a balance between innovation and respect for nature impressed Icsid. This is what allows Taipei to be recognized as a true design leader.

Taipei is truly a city driven by design. The officials chose the slogan “ Adaptive City –Design in Motion ” and devoted themselves to the preparation for the event. Planners considered how to deal with limited resources and how design could help bring citizens a better quality of life. They also thought about ways to create a forward-looking city.

In the end, sixteen projects were selected, and one by one, they have been presented to the public since 2013. One project uses smart technology to improve bus shelters, bus stops and traffic signals. In another, designers are working to make neighborhoods more attractive with creative store signs. Also, a city-wide, people-oriented walking system is being developed. What's better, a “ health and happiness park ” provides many resources for senior citizens in the Taipei Expo Park.

This year, we will see more design inspirations pop up all over Taipei. Taipei will prove that it is indeed qualified for the title “ World Design Capital. ”

(2) 56. Which of the following is true about the World Design Capital program?

- (1) It has a history over a decade.
- (2) It is an international campaign.
- (3) Taipei is the third city to hold the event.
- (4) The city that wins the title changes every year.

(4) 57. What is the reason that Taipei is selected as a World Design Capital?

- (1) Its richness of natural resources.

- (2)Its leading position in fashion design.
- (3)Its success in economic development.
- (4)Its work on preserving the environment.

(1)58.What is the theme that the 2016 event is based on?

- (1)Adaptive City –Design in Motion.
- (2)City with a Plan –Unique in Design.
- (3)City with a Plan –Design to Prosper.
- (4)Adaptive City –Design for Happiness.

(1)59.Which of the following is **NOT** a selected work to promote Taipei?

- (1)The pet-friendly Taipei Da-an Park.
- (2)The people-oriented walking system.
- (3)The high-tech bus shelters and stops.
- (4)The creative store signs inneighborhoods.

(4)60.Which is closest in meaning to the word “ **urban** ” in the first paragraph?

- (1)Industrial.
- (2)Countryside.
- (3)International.
- (4)Metropolitan.
